

Topics covered in Lecture 4:

- System info commands (pt 2)
 - `lscpu`
 - `free`
 - `uname -a` (kernel info)
 - `lshw -short` (full hardware summary)
 - `lsblk` (Block devices)
 - `top` (current running processes)
 - `ps -sf` (process snapshot)
 - `dmesg | less` (kernel buffer messages)
 - `journalctl -b` (system boot logs)
 - `systemctl list-units --type=service --state=running` (running services)
- Small asides
 - everything is a file
 - one app does one task
- Manipulating files
 - `touch`
 - `mv`, `cp`, `rm`
- Understanding `stdout`
 - `echo`
 - append to file (`>>`)
 - overwrite to file (`>`)
 - `cat`

Topics covered in Lecture 5:

- bash scripting
 - `seq`
 - `for` loop
 - * run through files in a directory
 - execute bash scripts
- Changing file permissions
 - `chmod`
 - * shebang
 - * Python executable with a shebang
 - * Bash executable with a shebang
 - `chown`
- SSH
 - asymmetric cryptography
 - ssh server
 - ssh client
 - password authentication v/s key-based authentication
